

TRAINED CUSTOMER REPLACEABLE UNITS (TCRU) GUIDE

PROACTIVE SYSTEM MAINTENANCE - TIME IS MONEY.

Quick job turnaround is of the utmost importance in busy production print environments. Any delay in delivery of time-sensitive materials – press releases, event flyers, direct mail, and so much more – can negatively impact the bottom line.

To mitigate risks to profitability, the optional Trained Customer Replaceable Units (TCRU) allow skilled operators to perform routine maintenance on the CS 13600 Series' mainframe.

Ten different components can be easily replaced, everything from the Drum Unit to the Fusing Unit. Two TCRU Kits (Set A and Set B) contain all the necessary parts, so components are available when they are needed. It's as simple as open > remove > replace. In fact, you need only one tool!

TCRU BENEFITS

- Planned maintenance when time permits; there's no waiting for a service technician.
- On-demand maintenance maximizes uptime, by avoiding unplanned downtime.
- Ensures reliable system performance and optimal image quality.
- Preventative maintenance (PM) cycles are longer; average number of service calls is reduced.
- Proactive maintenance enables you to meet customer expectations...and win more business!
